

## COVENANT SCHOOL OF NURSING USES EMPOWER TO EFFECTIVELY MANAGE RECORD NUMBER OF APPLICATIONS

### CHALLENGE:

In today's competitive environment, nursing schools are experiencing historically high numbers of applicants. Covenant School of Nursing is no exception. Effectively managing the admissions process is crucial for Covenant to recruit and admit students who meet their entrance requirements and will succeed both at school and professionally. With limited staffing and a high volume of applicants, many of whom will need to reapply more than once, reducing paperwork and increasing efficiency without hiring additional staff is key to the admissions department's smooth functioning.

### SOLUTION:

Deploying EMPOWER enabled Covenant to significantly streamline their application and admissions processes. Moving applications, financial aid information and official transcripts online not only made the process easier for applicants, but also for staff, who were then able to spend more time recruiting and evaluating student progress.

### THE EMPOWER DIFFERENCE:

The EMPOWER team understands the unique needs facing nursing schools today. Because it is so flexible and easily configurable for each individual school, EMPOWER allows users to make adjustments that will best suit the specific needs of any program. The ability to quickly process applicants and prospects makes front-office operations as efficient as possible, while EMPOWER's many different modules mean that coordinators, clinical instructors and administrators can all use the system with ease.

By using EMPOWER, schools can effortlessly streamline admissions processes, accreditation documentation, clinical evaluations and administrative functions. The unique ability to adapt and adjust to meet the ever-changing needs of the healthcare industry makes EMPOWER the clear choice for any nursing school.

### Covenant School of Nursing

Lubbock, Texas

"Knowing that EMPOWER can adjust to whatever we need allows us to be forward-thinking rather than be concerned with 'what can our system handle.'"
